

Exceptional *Innovation*.  
Extraordinary *Care*.

# AMBULANCE Fundrasier

Keyano College is the comprehensive college of choice in the Wood Buffalo area since 1965. We are committed to excellence in teaching and learning, industry training, and applied research through the delivery of relevant and sustainable programs and services that maximize opportunities for our students, staff, and stakeholders, and, that enable Keyano to engage in community leadership/development.

Keyano College plays a pivotal role in enhancing sustainability within the region. Through our Advanced Care Paramedic (ACP) and Primary Care Paramedic (PCP) programs, we prepare our students with the skills they need to deliver quality care in our region. It is vitally important that the students of these programs are provided with work-integrated learning opportunities to hone their skills before graduation. Our college is committed to supporting the ambulatory services demanded in our region and throughout the province.

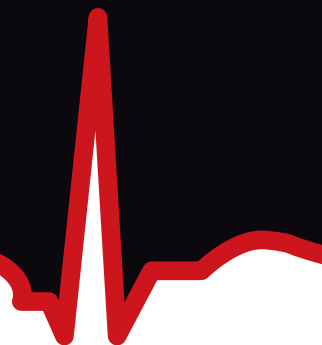

Recently our training aide Ambulance was destroyed by fire. We urgently need to replace this valuable training aid. Our students and Faculty rely on this to reinforce practical aspects of their programming.

The ACP two-year program integrates ambulance skills, transfers, and simulations in several courses. Our PCP students focus on stretcher carries and transfers, as well as Ambulance checks.

It is critical that we replace the ambulance this academic year. As such we are seeking stakeholders and community support to help us raise \$250,000 as soon as possible.

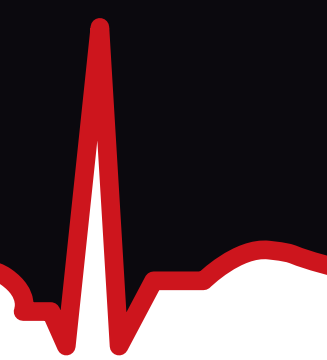

Outlined below is a sample of how the ambulance is used to emphasize and reinforce learning related to:

- Proficiency in basic life support assessment survey and the common advanced life support skills.
- Advanced Cardiac Life Support, Pediatric Advanced Life Support, and Neonatal Resuscitation.
- Conducting physical exams and diagnostic tests in the field.
- Differentiating life-threatening conditions and response.
- Demonstration of patient transport situations.
