Course Outline

3rd Class Power Engineering Coop
2019 Fall PECO 3300 A

PECO 3300 Steam Generation
4 credits, 4 weeks, 120 hours

Topics covered are boilers, boiler control systems, heating and air conditioning, feedwater treatment, pumps, and welding as identified in the Alberta Boilers Safety Association Reference Syllabus for the first paper of 3rd Class Part B Power Engineering.

Instructors

Brian MacDougall
Program Chair
780-792-5635
Brian.MacDougall@keyano.ca

Alan Block
780-791-4895
Alan.Block@keyano.ca

Rifat Dyrmishi
780-792-2681
Rifat.Dyrmishi@keyano.ca

Robert Marsh
780-792-5130
Robert.Marsh@keyano.ca

Rahul Ponde
780-792-5126
Rahul.Ponde@keyano.ca

Lorn Wionzek
780-792-5113
Lorn.Wionzek@keyano.ca
Office hours
As per request from students, instructors are available outside of instructional hours. Please arrange a time with your instructor.

Required Resources

Course Outcomes
Upon successful completion of this course, students will be able to:
- Discuss the designs & fabrication of many types of boilers including the high pressure fittings attached.
- Describe boiler heat transfer components and the variety of burner designs & supply systems.
- Explain boiler draft equipment including, air flow/fuel flow/multi-element combustion controls and boiler operation, maintenance, testing, start-up
  - & shut-down procedures.
- Evaluate boiler water treatment before and after boiler feedwater enters boilers.
- Analyze the designs of pumps including pump operation characteristics, pump calculations and operations
- Discuss welding processes, shielded metal arc welding, submerged arc welding, gas tungsten arc welding, gas metal arc welding, weld inspections, welding procedures, performance qualifications pressure vessels designs, operations and code requirements.

Evaluation
Quizzes..................... 20%

Section Test 1 ............. 20%

Section Test 2 ............. 20%

Exam 1...................... 40%

Total .................... 100%

The minimum standard for passing all S & E exams and the overall course is a grade of 65%. In addition, a PASS mark for completion of six month work experience co-op is required.

Performance Requirements

Technical training is considered an extension of the workplace in terms of attendance and punctuality. It is expected that students will manage their time in accordance with the published program schedule and will attend all classes.

Behaviours of a Successful Student
The SKILL Centre is a learning space in the Clearwater Campus where students can gather to share ideas, collaborate on projects and get new perspectives on learning from tutorial staff. A student conference room is available for students to “reserve” for student group purposes. The SKILL Centre is for support and reinforcement of course concepts. Hours of operation are Monday – Friday 8:30am - 4:30pm. Additional evening and weekend tutorial hours will be posted in the Skill Centre or please contact skill@keyano.ca to confirm tutoring availability.

Keyano College Student Rights and Code of Conduct:

It is the student’s responsibility to familiarize themselves with the Student Rights and Responsibility Policy found in the Keyano College Credit Calendar 2019-2020, pages 40-43. The information contained in this policy should guide the student’s conduct while attending Keyano College.

Teaching & Learning Methodologies

This course is delivered in a classroom setting, supplemented by online testing through iLearn/Moodle; http://ilearn.keyano.ca

- iLearn/Moodle will be used for ongoing assessment purposes. Please be patient and bring questions/concerns regarding the test bank to your instructor.

- All quizzes and exams on iLearn will open in a SECURE window. Any attempts to breach security measures (i.e. copy, print, screen capture, right clicking, navigation away from quiz/exam window, etc.) will automatically eject you out of the quiz. Occurrences of this nature will be documented and kept on student record, be considered academic misconduct and just cause for disqualification of course completion.

- iLearn/Moodle quizzes will be released by instructor as per course instruction schedule. Consideration will be given for exam preparation 2 days prior to exams.

Student Academic Support Services

It is the College’s goal that learning experiences be as accessible as possible. If you anticipate or experience physical or academic barriers based on a disability, please let your instructor know immediately so options can be discussed. You are also welcome to contact Student Academic Support Services to establish reasonable accommodations. Please call 780-791-8934 or drop in at CC167.

It is your responsibility to contact the Office of the Registrar to update your contact information and complete forms related to changes of registration.
Learning Outcomes

1. Describe common designs, configurations and circulation patterns for modern bent-tube watertube boilers and steam generators and explain how boilers are rated.
2. Describe the designs, components, firing methods, and operating considerations for some special boilers used in industry.
3. Explain Code requirements, in general terms, and describe construction and assembly methods for the major components of a large boiler.
4. Explain the purpose, location, design and operating conditions for the major heat transfer components of a large watertube boiler or steam generator.
5. Describe the design and operation of common external and internal fittings attached to the pressure side of a high-pressure boiler.
6. Describe the typical components of fuel supply systems and describe common burner/furnace designs for gas, oil, and coal-fired boilers.
7. Explain boiler draft systems and fans and describe the equipment used to remove ash from flue gas.
8. Explain the components and operation of automatic control systems for boiler water level, combustion, steam temperature, and start-up.
9. Describe common procedures in the operation and maintenance of high pressure boilers.
10. Define properties of saturated and superheated steam and, using information from the steam tables, calculate the heat required to produce steam at various conditions; determine the evaporation in steam boilers.
11. Explain the purpose, principles, equipment, and monitoring of boiler water pretreatment processes.
12. Describe the designs, principles, components and operating procedures for common industrial pumps.
13. Explain proper priming and start-up procedures and considerations for
14. Explain the processes and applications of different welding techniques and describe the testing of welds and procedures.
15. Explain pressure vessel design, stresses, and operating considerations.
