PELM 3200 Plant Services

This course covers industrial legislation, codes, boiler calculations, fuels and combustion, piping, electro technology, electrical calculations, control instrumentation and fire prevention and plant safety as identified in the Alberta Boilers Safety Association Reference Syllabus for the second paper of 3rd Class Part A Power Engineering.

Instructors

Alan Block

Office#: BL 158

Office hours

Instructors are available outside of instructional hours upon request from student.
Required Resources: (Available at Keyano College Bookstore)

Power Engineering Fourth Class (Textbook), Preparatory Topics for Power Engineers, PanGlobal, ISBN 978-1-77251-074-4

Course Outcomes

Upon successful completion of this course, students will be able to:

1. Discuss provincial, national and international codes for boilers, pressure vessels & power engineers including code calculations from American Society of Mechanical Engineers boilers and pressure vessels.

2. Describe types of characteristics of fuels, flue gas analysis, piping design, connections, supports, steam traps, water hammer concerns, insulation, types of valves and actuators.

3. Explain electricity fundamentals including, electrical theory, AC/DC machines, switchgear, safety, electrical calculations, control loops & strategies.

4. Analyze instrumentation & controls, distributed control systems, and logic controls

5. Discuss safety management programs including Occupational Health & Safety, workplace safety, work permits systems, equipment lockout, confined space entry, WHMIS and accident investigation procedures.

6. Distinguish between fire protection systems including, fire detection & alarm systems, sprinklers, deluge water systems and emergency fire response procedures.
Evaluation
Students will be graded using percentage scales.

<table>

<td>10%</td>
</tr>
<tr>
<td>Total Grade</td>
<td>100%</td>
</tr>
</tbody>
</table>

The minimum standard for passing the overall course is a grade of 65%.

Performance Requirements
The Power Engineering online program provides access to a comprehensive computer question bank designed to highlight subjects in the Alberta Boiler’s Branch syllabi. Assessments are generated and marked by the Computer and Power Engineering Instructors. The online program is supplemented by tutorial assistance offered by qualified instructors during posted hours.

Behaviours of a Successful Student

goes beyond required homework
proper nutrition
seeks additional assistance
researches extra
positive
attentive
practice
open
shares knowledge
organized
works hard
responsible
courteous
professional attitude
study habits
good communication skills
resourceful
keeps feedback experience
good attendance
ready
seeks feedback
experiences
seeks additional assistance
negotiates

SKILL Centre Information:
The SKILL Centre is a learning space in the Clearwater Campus where students can gather to share ideas, collaborate on projects and get new perspectives on learning from tutorial staff. A student conference room is available for students to “reserve” for study group purposes. The SKILL Centre is for “support” not to “teach” you course content due to lack of attendance.

Additional evening & weekend tutorial hours will be posted in the Skill Centre or please contact skill@keyano.ca to confirm tutoring availability.

Academic Regulations
Refer to pages 25 & 26 of the Keyano College 2017-2018 Credit Calendar or use this link to view Keyano College’s Academic Regulations.

Keyano College Student Rights and Responsibilities:
It is the student’s responsibility to read the Student Rights and Responsibility Policy document found in the Keyano College Credit Calendar 2016-2017, pages 34-37. The information contained in this policy should guide the student’s conduct while attending Keyano College. Below are a few “Highlights” to note:

**Student Rights:** The student has the right to:
- Reasonable freedom of opinion and expression in the classroom, in assignments, and in exams, where course content allows.
- Confidentiality of his/her personal records.
- Proper and impartial evaluation of his/her performance and the right to request a re-evaluation within time lines and procedures established by the College.
- Freedom from being subjected to physical, verbal, mental, or sexual harassment including any indignity, injury, violence or unfair accusation.
Student Responsibilities: The student has the responsibility to:

- Respect the rights of ALL others. Respect is earned.
- Refrain from threatening to subject or subjecting any person to physical, verbal, mental, or sexual harassment including any indignity, injury, violence or unfair accusations.
- Respect the faculty member's right to determine course methodology, evaluation, right to set deadlines for assigned work, and to establish penalties for failure to comply with deadlines.
- Refrain from unduly disturbing, disrupting or otherwise interfering with studies, laboratories, lectures, work or other activities of fellow students or staff.
- Know the consequences of plagiarism, fraud, deceit, and/or other forms of academic and non-academic dishonesty.
- Not openly share marks and other confidential information/material in the classroom.

Teaching & Learning Methodologies

The Power Engineering online program through iLearn (Moodle); [http://ilearn.keyano.ca](http://ilearn.keyano.ca) is a system that provides students with a quick assessment of their academic achievement while they progress at their own pace, on their own schedule. Students can enroll at any time and have one year from the date of registration to complete both Part A and B theory. A total of two three-month extensions may be purchased. Extended hours and the ability for students to access the system from home or work are features designed to make the training as accessible as possible. Please note:

- iLearn/Moodle will be used for ongoing assessment purposes. Please be patient and forward questions/concerns regarding the test bank to the Power Engineering Department.
- All quizzes and exams on iLearn will open in a SECURE window. Any attempts to breech security measures (i.e. copy, print, screen capture, right clicking, navigation away from quiz/exam window, etc.) will automatically “kick” you out of the quiz. Occurrences of this nature will be documented and kept on student record, be considered academic misconduct and just cause for disqualification of course completion.
Specialized Supports & Duty to Accommodate

Disability Support Services: Learner Assistance Program (LAP):
If you have a documented disability or you think that you would benefit from some assistance from a Disabilities Counsellor, please call or visit the Disability Supports Office 780-792-5608 to book an appointment (across from the library). Services and accommodations are intended to assist you in your program of study, while maintaining the academic standards of Keyano College. We can be of assistance to you in disclosing your disability to your instructor, providing accommodations, and supporting your overall success at Keyano College.

Specialized Supports and Duty to Accommodate:
Specialized Support and Duty to Accommodate are aligned with the office of Disability Support Services: Learner Assistance Program (LAP) guided by federal and provincial human rights legislation, and defined by a number of Keyano College policies. Keyano College is obligated by legislation to provide disability-related accommodations to students with identified disabilities to the point of undue hardship.

Please Note: It is your responsibility to contact the Office of the Registrar to update your contact information and complete forms related to changes of registration.

Learning Outcomes

1. Explain the purpose of, general content of, and interaction with, the legislation and codes that pertain to the design and operation of boilers and related equipment.

2. Given the tube material specification numbers, and other necessary parameters, use the formulae in PG-27.2.1 to calculate either the minimum required wall thickness or the maximum allowable working pressure for a boiler tube.

3. Explain the properties and combustion of common fuels and the analysis of combustion flue gas.

4. Discuss the codes, designs, specifications, and connections for ferrous, non-ferrous and non-metallic piping and explain expansion and support devices common to piping systems.

5. Explain the designs and operation of steam trap systems, the causes and prevention of water ham. Describe the designs, configurations and operation of the common valve designs that are used in power and process piping.

6. Describe the designs, configurations and operation of the common valve designs that are used in power and process piping.

7. Explain basic concepts in the production of electricity and the design, characteristics and operation of DC generators and motors.

8. Explain formation and characteristics of AC power, and describe the design, construction and operating principles of AC generators, motors and transformers.

9. Identify the components of typical AC systems and switchgear and discuss safety around electrical systems and equipment.

10. Define terms and perform simple calculations involving DC and AC power circuits.

11. Explain the operation and components of pneumatic, electronic and digital control loops, and discuss control modes and strategies.

12. Design and explain the principles of common temperature, pressure, flow and level instruments.

13. Explain the general purpose, design, components and operation of distributed and programmable logic control systems.

14. Explain the intent, scope and purpose of safety management programs including Occupational Health & Safety, workplace safety, work permits, confined space entry, Work Place Hazards Material Information System and accident investigation procedures.

15. Discuss the classes and extinguishing media of fires, and explain systems that are used to detect and extinguish industrial fires.
